Dear Sir,

Subject: India Groundnut Market Report

Please find below our update on the Indian winter groundnut (Kharif) season.

Rainfall Situation

Cumulative rainfall for the season stands at roughly 10-15% below normal on an all-India basis, with distribution highly uneven across regions.

At this stage, those regions which experienced late monsoon showers in the last two weeks are projected to have a very positive impact on the crops and their subsequent yields, which otherwise, are expected to be on the lower side in most parts of the country.

Final Sowing Data – Government Numbers with a two year comparison

Sowing Area (State)	2025 (Hectares)	2026 (Hectares)
Gujarat	2,202,300	2,069,900
Rajasthan	1,285,817	1,185,738
Madhya Pradesh	502,800	591,900
Uttar Pradesh	355,980	471,763
Andhra Pradesh	207,964	156,768
Karnataka	239,481	149,378
Maharashtra	135,349	140,811

Overall Outlook

Parts of Gujarat and Rajasthan that predominantly produce the Bolds have had very limited rain fall. This would potentially lead to a short supply of export grade kernels, more so, the larger sizes. There is expected to be a larger supply of the Java type from central India as compared to last season. The fact that the Indian government has reduced duties on edible oil last week will help keep prices in check.

Stocks and Demand

Government procured stocks from last season have reduced significantly. However, local markets still show some demand for this product due to the price incentive. The quality has deteriorated in most of the warehouses and selection, if possible has to be done very thoroughly. With roughly 20 - 30 days remaining until the new crop arrives, most factories are awaiting the new material rather than use the this carryover stock.

New Crop Arrivals

We had about 100,000 bags of Inshells arriving in various market yards in Gujarat on Monday, 28th and this will gradually increase with peak arrivals expected starting 15 – 25 October. In other parts of India like Rajasthan, UP and MP the arrivals would commence around 10 – 15 October and peak by early November.

Prices
Prices for the new crop to be shipped in November and / or December are already being quoted competitively in anticipation of the new crop arrivals and it is reported that some trades have already taken place for the Far East Markets. Luckily for us, freight to South East Asia has not been as erratic or expensive as it has been for west bound shipments so trade continues to remain fairly smooth. Container availability and sailing frequencies are hiccups that we are still dealing with.

Current FOB Values for **Non-EU** destinations are as follows for November / December shipments –

BOLDS -
38/42: We are awaiting new crop arrivals to determine pricing
40/50: USD. 1215 pmt
50/60: USD. 1180 pmt

JAVA
50/60: USD. 1350 pmt
80/90: USD. 1300 pmt

TJ (JAVA TYPE)
50/60: USD. 1220 pmt
80/90: USD. 1190 pmt

BLANCHED - WHOLE – In 25 kgs vacuum bags
40/50: USD. 1450 pmt
50/60: USD. 1430 pmt

BLANCHED - SPLITS – In 25 kgs vacuum bags
40/50: USD. 1400 pmt
50/60: USD. 1380 pmt

Please revert your best interest.

Regards – Sanjiv Sawla
