

Dear

Greetings for 2025.

**Overview:**

As winter sweeps in and Sankranti—the kite flying festival—draws near, sesame seed demand in Western India soars, propelled by seasonal sweets and confectionery. But just like the kites, our data is all over the place! Prices are appealing compared to last year, disposable incomes are steady, and the stock exchange is in good spirits. Yet, reports on local demand are as mixed as a bag of trail mix.

**Key Considerations:**

Shifting Consumption Patterns: Are people ditching traditional sesame based sweets for avocado toast and quinoa bowls ?

Market Saturation: Is it a case of too many chefs spoiling the broth, or in this case, importers augmenting the sesame supply ?

Import Impact: Are we importing so much sesame that we're drowning in seeds ?

Delayed winter : Is sesame too cool an item to handle rather than heat things up ?

**Market Dynamics:**

India's sesame seed exports are on a steady course, with a notable move in hulled sesame. Between the local crop and imports, we have enough inventory to last until the summer crop in May-June 2025. But, just like in any good mystery, the plot could twist: a sudden demand spike might drive prices up, otherwise, markets are expected to stay as flat as a pancake.

Black Sesame Seed Surge: The star of the show in recent months has been black sesame seeds, with prices soaring past USD 3,000 per ton—levels we haven't seen since dinosaurs roamed the Earth (okay, maybe not that long, but you get the drift).

Currency Fluctuations: The Indian Rupee has been on a wild ride, depreciating faster than you can say "exchange rate." This makes sesame exports more competitive but also hikes up the cost for sesame imports, keeping prices in check for many consuming countries.

**Conclusion:**

The sesame seed market in India is juggling multiple factors this year. With export data for the new crop still awaited, we're left pondering the shift in consumption, market

saturation, and import impacts. Add in the black sesame's dazzling performance and currency fluctuations, and we've got quite the spicy storyline.

This report serves as a snapshot with a dash of humour to keep things lively in an otherwise boring trade ( off late ). Let's chew over this food for thought as we navigate the sesame seas!

Hope this brings a smile to your face.

Any purchases on your mind ? Current values for Jan – Feb 2025 shipments, FOB Mundra / Pipavav, are as follows –

Natural Sesame Seed 99/1/1 – USD. 1525.00 pmt

Natural Sesame, Sortex, Min. 99.95 % purity : USD. 1645.00 pmt

Hulled Sesame, min. 99.95 %, Gujarat : USD. 1895.00 pmt

Hulled Sesame, min. 99.97 %, Gujarat : USD. 1905.00 pmt

Hulled Sesame, min. 99.98 %, Gujarat : USD. 1920.00 pmt

Hulled Sesame, min. 99.95 % ( Brazil raw material ) : USD. 1835.00 pmt

Hulled Sesame, min. 99.97 % ( Brazil raw material ) : USD. 1845.00 pmt

Hulled Sesame, min. 99.98 % ( Brazil raw material ) : USD. 1860.00 pmt

Prices available for EU / USA, meeting pesticide conditions as well.

We await any and all inquiries.
